13 DESCRIPTION OF PRODUCT

The OME Series Explosion-proof Quarter-Turn Actuators are designed to provide control of valves. It comprises of a coated aluminium main body and cover. The cover is secured by means of four hexagonal head cap head screws, forming a cylindrical flameproof joint with the main body.

The enclosure houses a motor and associated electronics, which drive a carbon steel transmission shaft via a mechanical transmitting unit. Some models within the series are fitted with a rotating drive handle that may be used to manually operate the mechanical transmitting unit when it is de-energised. Additionally, the enclosure may be fitted with an optional heater.

The flameproof enclosure has a mechanical indicator at the upper end of the cover to show the position of the actuator valve, which can be viewed through the toughened glass window, sealed via a cemented joint.

The internal motor winding contains a bimetallic strip for thermal protection, which is set to operate at 125°C. The motor is provided with class F insulation.

The equipment provides a degree of ingress protection IP68 (7 metres for 72 hours), which is maintained by O-ring seals in each joint and oil seals in the interface between the main body housing and transmission/drive handle shafts.

The flameproof main body housing features a cylindrical flameproof joint with both the transmission shaft and drive handle shaft (where fitted). Externally it is fitted with two threaded cable entries, for types OME-1, OME-A and OME-AM, either M20x1.5 or 1/2" NPT, and for types OME-2 through OME- 8, either M20 X1.5, M25 X 1.5, 1/2" NPT, or 3/4" NPT. Each cable entry is supplied fitted with stainless steel blanking plugs, which may be replaced by the end user with a suitably certified and rated flameproof cable entry device.
